

BUILDER EDITION - ASSIGNMENT FEEDBACK

Session 01 - The Proper Foundation - Assignment S01_A01

Student: Aanya

Module 1 - Programming Foundations

Graded: 25 Jul 2026

Pass mark: 50/100

SCORE

84 / 100

Bonus not attempted

Excellent first assignment

Strong, clean work - every program runs and the tricky type questions are spot on.

84% - well above the 50% pass line

MARKS BREAKDOWN, QUESTION BY QUESTION

Q	What it tested	Level	Score	Feedback
Q1	Predict type() of int / float / str	EASY	3/5	Predictions all correct (int, float, str). Marked down only because they are written as trailing comments - the question asked for the prediction inside a <code>docstring</code> .
Q2	Reassigning a variable (the refilled box)	MED	5/5	Correctly predicted sold out and type str , and explained the box was refilled with a new value and type. Full marks.
Q3	snake_case names + values	MED	9/10	Good snake_case names, right order, prints correctly. Small typo: the brand is Praksh Mart , you wrote 'Prakash Mart'.
Q4	Five types on one product	MED	10 / 10	All five type() lines correct and in order - including NoneType and float. This is the exact trap most beginners miss. Perfect.
Q5	Reassignment + one-line swap	MED	10 / 10	58 then 62, and the single-line swap gives 'Dal Rice'. Elegant use of <code>a, b = b, a</code> - no temp variable. Perfect.
Q6	Commented startup banner	MED	10 / 10	Comma-spaced banner, a proper header comment (purpose + author), and a genuine <i>why</i> -comment. Exactly the commenting habit we want.
Q7	Fix the bug (NameError / case)	MED	10 / 10	Fixed correctly and you named the real cause - variables are case-sensitive. Well diagnosed.
Q8	Product record report	HARD	15 / 20	All five facts and types right (weight 1.0, discount None), plus the reassignment to 45 with a <i>why</i> -comment. Missing: the question asked for six labelled lines (e.g. 'Name: Sugar') - you printed raw values.

Q9	System boot report	HARD	12 / 20	Four labelled lines are correct. Missing two required parts: a header line and a final Types: line printing type() of all four values in order.
Q10	Bonus - int() + f-string (Session 2 taster)	HARD	0 / 10 (bonus)	Not attempted. It wanted <code>int("20")</code> then an f-string computing <code>5 * price</code> inside the braces to print 'packets cost Rs 100'.

WHAT YOU DID REALLY WELL

- ✓ Every single program runs cleanly with no errors - a professional habit from day one.
- ✓ You nailed the type traps: NoneType, float 1.0 and bool are all correct where most beginners slip.
- ✓ The one-line swap in Q5 is genuinely elegant, correct Python.
- ✓ Your Q6 comment explains the *why* ('gives customers key information immediately'), not just the what - that is mature commenting.
- ✓ You correctly identified case-sensitivity as the cause of the Q7 NameError.

CODING PRACTICE - THE CRAFTSMAN'S CODE

- > Your file is correctly named `S01_A01.py` - good submission discipline.
- > Next level: wrap each answer in its own function - `q01_types()` , `q02_refilled_box()` - with the prediction written inside a `"""docstring"""` instead of a trailing comment. This alone would recover the Q1 marks.
- > Tiny PEP 8 fix: write `print(shop_name)` with no space before the bracket (you have `print (shop_name)` in a few places).
- > Keep the consistent snake_case you already use - that is exactly right.

WHERE TO IMPROVE

- **Q8:** add labels so the output reads like a report - `Name: Sugar` , `Price: Rs 42` , and so on - not just the bare values.
- **Q9:** add the header line and the final `Types:` line (type() of all four, in order) for the remaining 8 marks.
- **Always attempt the bonus** - even a rough try. It previews the next session and builds the habit.
- Move to the **function + docstring** structure across every answer from Session 2 onward.

YOUR TARGET FOR THE NEXT SESSION

Your foundations are strong - 84 is a great start. For Session 2 (typecasting, operators and input()), focus on two things: (1) write each answer as a function with a docstring, and (2) master `int()` / `float()` conversion - exactly the skill the Q10 bonus needed. Bring that bonus solved next time.
