

BUILDER EDITION - ASSIGNMENT FEEDBACK

Session 02 - Numbers, Conversions & Talking to Users - Assignment S02_A02

Student: Aanya

Module 1 - Programming Foundations

Graded: 01 Aug 2026

Pass mark: 50/100

SCORE

95 / 100

Bonus not attempted

Outstanding depth

Nine questions, all correct, with comments that show you understand the why - not just the what.

95% - well above the 50% pass line

MARKS BREAKDOWN, QUESTION BY QUESTION

Q	What it tested	Level	Score	Feedback
Q1	Operator precedence	EASY	10 / 10	60, 160, 5.0 - correct, with the right reasoning in comments.
Q2	//, %, string vs number *	MED	11 / 12	Great insight: you noted <code>"3"*2</code> repeats the text, then printed <code>3*2</code> to show the real product.
Q3	Typecasting int/float/str	MED	10 / 12	All correct, and you explained <code>int()</code> truncates toward zero (not rounds) - excellent. Tidy-up: the bare expression lines before the prints do nothing.
Q4	Divide, modulo, power	EASY	10 / 10	12, 4, 1024 - correct.
Q5	Boolean logic (and/or/not)	MED	12 / 12	All five booleans correct, including the combined conditions. Perfect.
Q6	Accumulator pattern	MED	12 / 12	Running total 90 with clear step comments. Exactly the pattern we want.
Q7	Text price + delivery (<code>int()</code>)	EASY	10 / 10	200 - correct conversion before adding.
Q8	f-string bill + change	MED	11 / 12	127.5 and 72.5 correct. Next level: format money to 2 decimals with <code>:.2f</code> (that is Session 4).
Q9	Change-making 1745	HARD	9 / 10	Denominations correct. Same tidy-up on spacing before brackets.

WHAT YOU DID REALLY WELL

- ✓ You do not just get the right answer - your comments explain the reasoning (int() truncation, string vs number multiply).
- ✓ The accumulator in Q6 and the boolean logic in Q5 are textbook-correct.
- ✓ You are already reaching for f-strings everywhere - a great habit.

CODING PRACTICE - THE CRAFTSMAN'S CODE

- > Same spacing note: `print(...)` with no space.
- > Drop the bare expression lines in Q3 (e.g. `int(4.9)` on its own) - they compute nothing visible.
- > When money appears, format with `:.2f` so 127.5 shows as 127.50.

WHERE TO IMPROVE

- Format all currency to two decimals going forward.
- Keep one clean statement per idea - compute and print in one line.

YOUR TARGET FOR THE NEXT SESSION **95 - excellent.** Your number and logic foundations are rock solid. In Stage 2 you will point these skills at real datasets - you are ready.
