

BUILDER EDITION - ASSIGNMENT FEEDBACK

Session 04 - Professional Output - Assignment S04_A02

Student: Aanya

Module 1 - Programming Foundations

Graded: 01 Aug 2026

Pass mark: 50/100

SCORE

96 / 100

Bonus not attempted

Outstanding - receipt-quality output

Ten questions, all correct, including a fully aligned receipt with GST and a discount rule. Professional-grade formatting.

96% - well above the 50% pass line

MARKS BREAKDOWN, QUESTION BY QUESTION

Q	What it tested	Level	Score	Feedback
Q1	Decimals, thousands, percent	EASY	10 / 10	12.50, 1,250,000, 15.7% - all correct.
Q2	Alignment < > ^	MED	9 / 10	Left, right, centre in a 10-width field - correct.
Q3	Combined number formats	MED	10 / 10	Including <code>sales: ,.2f</code> → 1,250,000.00. Correct.
Q4	Padded header + rows	MED	10 / 10	The *-padded centred banner and aligned rows - correct.
Q5	join()	EASY	10 / 10	Both joins correct.
Q6	Validation checks	MED	10 / 10	startswith, isdigit on a slice, isalpha, and '12.50'.isdigit() → False. You understood the dot fails isdigit(). Excellent.
Q7	Right-aligned currency	EASY	9 / 10	'Rs 42.50' - correct padding.
Q8	Full aligned receipt	HARD	10 / 10	Header, columns, rows, total all line up perfectly. This is real receipt output.
Q9	Subtotal + GST + grand total	HARD	9 / 10	GST 22.55 and grand total 473.55 - correct. Tiny thing: some trailing spaces at the end of the block; harmless but worth trimming.
Q10	Discount rule with if	MED	9 / 10	Over-500 discount applied: 'You pay: Rs 617.50' - correct logic and formatting.

WHAT YOU DID REALLY WELL

- ✓ Your receipts are genuinely aligned - column widths, decimals and separators all correct.
- ✓ Q6 shows real understanding: you knew '12.50'.isdigit() is False because of the dot.
- ✓ You combined formatting with an if-rule in Q10 - joining two sessions' skills smoothly.

CODING PRACTICE - THE CRAFTSMAN'S CODE

- > Beautifully consistent f-string formatting - this is professional output.
- > Trim stray trailing spaces/indentation at the end of a block (end of Q9).
- > Consider storing the repeated `line = '-'*30` once at the top and reusing it.

WHERE TO IMPROVE

- Reuse constants (the divider line) instead of redefining them.
- A final trim for stray whitespace before submitting.

YOUR TARGET FOR THE NEXT SESSION 96 - excellent, and genuinely job-like output. This formatting skill is exactly

what makes a data analyst's reports readable. You are ready for real data in Stage 2.
